PROFESSIONAL SUMMARY

Senior DevOps and Infrastructure Engineer with 15+ years of experience automating large-scale build environments, managing cloud infrastructure, and leading cross-platform CI/CD initiatives across North America and Japan. Known for delivering reliable automation pipelines and containerized environments (EC2/ECS), and for building PoC infrastructure for LLM inference APIs designed to evolve toward agentic orchestration systems. Former Apple engineer trusted to lead automation across 500+ distributed servers.

CORE SKILLS

- Infrastructure Automation: Ansible, Terraform, Docker, GitHub Actions
- Cloud & Systems: AWS, Azure, Apple internal cloud, Linux, Windows, macOS
- Programming & Scripting: Java, Python, Bash, Perl
- CI/CD & Build: Jenkins, Azure DevOps, GitHub, Artifactory, Maven, XBS
- Monitoring & Reliability: ELK Stack, Grafana, Splunk, Prometheus
- Security: OAuth2.0, OIDC, SAML2.0, Certificate Management, Code Signing
- Collaboration: Incident triage, cross-team leadership, stakeholder alignment

PERSONAL PROJECTS

AWS EC2/ECS Infrastructure Automation Toolkit – open-source

- Automated EC2 lifecycle with Python (boto3), Ansible, Terraform/OpenTofu
 - Built PoC LLM inference API (FastAPI) routing to OpenAI/Ollama on EC2
 - Prepared IaC for ECS migration; prior Java microservice ECS deployment
 - Added observability with Prometheus & Grafana
 - Roadmapped toward self-healing agentic orchestration
- GitHub: [masashik/aws-ec2-utils](https://github.com/masashik/aws-ec2-utils)

PROFESSIONAL EXPERIENCES

Slalom Inc., Toronto, Ontario. Canada.

Architect - Platform Engineering (Full-time)

September 2025 – Present

- Provides automation and DevOps expertise in the form of hands-on technical leadership on multi-functional project teams creating scalable, resilient, and automated solutions.
- Act as a hands-on, technical lead for a development pod of engineers on multi-functional teams, creating purpose-built software products.
- Leading the design and delivery of major components of a modern Platform Engineering solution.
- Provide domain expertise in DevOps culture, tooling, delivery methods, and cultural practices.
- Drive work effort estimation and story pointing to align to user and business goals at each phase of an Agile project.
- Develop project/technology case studies, training materials, and technical guidance.
- Help grow culture of learning by taking part in and coordinating opportunities such as presenting at technical conferences, community groups, writing blog articles, and contributing to partner-coordinated workshops.

Apple Inc., San Diego, California. USA.

Software Build Engineer (Full-time)

March 2022 – May 2025

- Transformed Apple's distributed build infrastructure by automating 500+ macOS, Linux, and Windows servers used in core product builds (Safari, iWork, Apple TV firmware).
- Designed and maintained a fleet of Ansible playbooks to install and configure complex toolchains (including container runtimes) across Linux and Windows builder hosts, significantly reducing manual errors and provisioning time.

- Led a high-impact automation project that eliminated manual build metadata processes, turning a bottleneck into a self-service workflow – reducing latency to zero and earning recognition from QA and senior engineering leadership.
- Responded to and resolved high-priority incidents including cert expirations, config failures, and disaster-triggered outages. Authored risk reports and coordinated cross-functional recovery efforts.
- Created live triage tools and diagnostics scripts using GNU Screen, Vim, and shell utilities to enhance monitoring and response time.

TD Bank Group, Toronto, Ontario. Canada.

Enterprise Architect (Full-time)

March 2017 – April 2021

- Modernized TD’s internal API systems in alignment with Open Banking initiatives, prototyping and deploying secure OAuth2/OIDC-based access patterns.
- Conducted PoC research and built prototypes for scalable microservice ecosystems, exploring circuit breaker designs and authentication flows.
- Led an internal hackathon team that delivered a mobile banking platform prototype and Azure DevOps pipeline—recognized by senior leadership for innovation.
- Built a QR-code payment app integrated with OIDC APIs as part of a donation pilot with United Way.
- Served as architecture review board member, providing strategic input on security and service modularity.

Equifax, Toronto, Ontario. Canada.

DevOps Engineer (Contract)

May 2016 – March 2017

- Provisioned QA and production environments for Canada’s Credit Verification System using SUSE Linux, Oracle DB, and IBM WebSphere.
- Built automated Jenkins pipelines and Bash scripts to enforce environment consistency and reduce human error.
- Resolved a persistent QA testing issue by automating rebuilds of tooling on every Git commit—boosting test reliability and earning direct praise from leadership.
- Gained hands-on experience coordinating global release processes with offshore teams and navigating production risk.

Earlier Experience - Sentaca (TELUS), Terapeak, ComQi, BoldRadius, Superna.io, and GREE, Tokyo, Japan. Ottawa, Toronto, Ontario.

Senior/Full Stack Developer and Software Engineer roles

Jan 2011 – February 2016

- Delivered RESTful APIs, internal tools, and analytics platforms in telecom, e-commerce, and digital signage domains.
- Technologies included Java EE, AngularJS, Dropwizard, MySQL, GlassFish, and PHP.
- Contributed to both startup agility and enterprise delivery at scale.

EDUCATION

Acadia University, Wolfville, Nova Scotia. Canada

September 2005 – December 2010

Bachelor of Computer Science
